

ADDUPT

Addressing skills mismatching in the green sector through Digital Upskilling of VET

SKILLS FOR THE TWIN TRANSITION: THE ADDUPT CAPACITY BUILDING PROGRAMME FOR VET TRAINERS

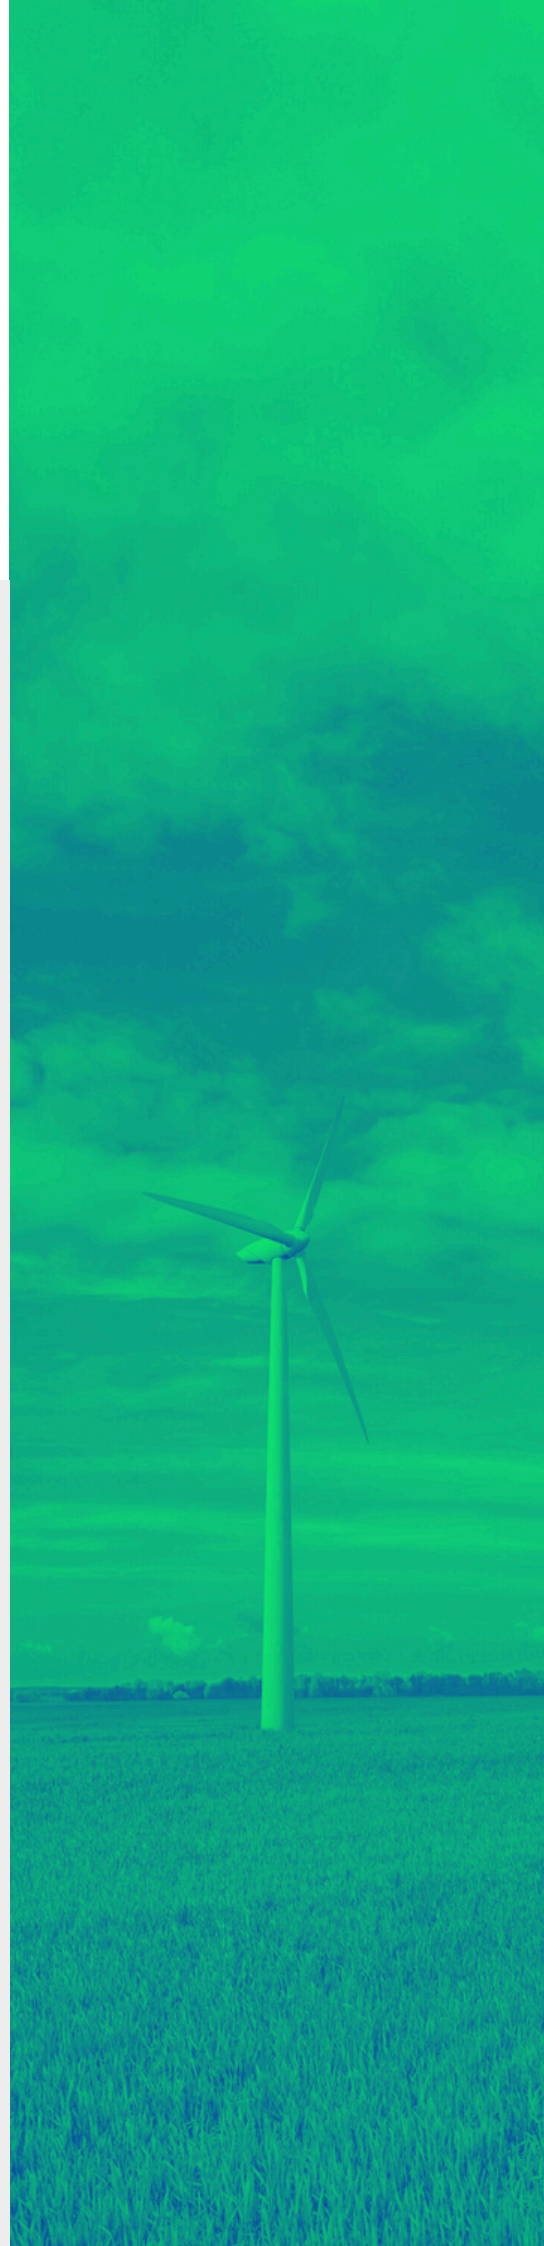

Dear Readers,

We are enthusiastic to present the latest updates from the ADDUPT project—the initiative focused on addressing the skills gap in the green sector across the Western Balkans through specialized digital upskilling in vocational education and training (VET).

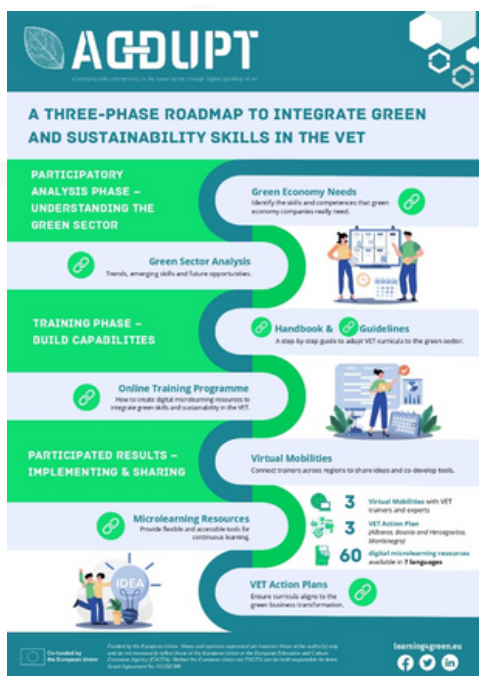

As the green economy continues to evolve, the demand for competences to embrace new technologies and sustainable practices has never been more essential. Our mission is to contribute to this growing sector, supporting sustainability and innovation.

PROJECT OVERVIEW

ADDUPT stands for "Addressing Skills Mismatching in the Green Sector through Digital Upskilling of VET." This project is a beacon of innovation and collaboration, aiming to strengthen the connection between the VET sector and the green industry in the Western Balkans. By developing a comprehensive capacity-building program, including workshops, digital resources, and educational materials, ADDUPT is set to enhance VET organizations' skills, knowledge, and capabilities.

PROGRESS HIGHLIGHTS

As the ADDUPT project approaches its conclusion, a series of local events across Albania, Montenegro, and Bosnia and Herzegovina have celebrated the project's achievements and strengthened connections within the green VET community. These gatherings brought together representatives from VET institutions, training centers, and civil society organizations, creating meaningful synergies and fostering collaborative networks aimed at advancing sustainability in vocational education.

Participants engaged actively in workshops and discussions, sharing insights that informed the development of actionable strategies for the green sector.

The project activities culminated in the **Final Conference** in Málaga, gathering key stakeholders of the vocational education and training environment from Europe to visualise together on the **project outcomes and explore new opportunities** to further promote a more sustainable VET sector contributing to the green economy transition.

The project's journey—from the initial green sector participatory-analysis to the creation of tailored VET action plans in Albania, Bosnia and Herzegovina and Montenegro —is beautifully captured in the video [Green and Digital Skills for the Future](#) and all the project results remain available on the [ADDUPT Website](#).

WHAT NOW?

Following the **successful conclusion of ADDUPT**, the focus now turns to translating project insights into practical actions. Partners will advance the developed VET strategies, consolidate the networks established, and pursue further collaborative initiatives.

STAY CONNECTED
